

## ***What some clients say about Repel***

### ***Shane Clement, Hunter Concrete Pty Ltd***

Our Besser pipe producing plant was the first in Australia. Our efficient manufacture of high quality pipes has depended absolutely on Repel. Nothing works as well for our business.

### ***Richard Amadio, PumperDump Pty Ltd***

PumperDump approached Berryessa to supply a release agent for our concrete washout waste units. We had been looking for a "diesel free solution" for our units and Richard Maerschel and staff at Berryessa were most helpful in finding a solution for PumperDump. We wanted an environmentally responsible product which was water based.

Richard at Berryessa was keen to experiment to meet the needs of PumperDump's application requirements and was willing to tailor their product to our needs. PumperDump has found Repel 62 to be exactly what we required both from an application point of view and also from an OHS perspective of being safer for our employees.

PumperDump recommends Repel 62 and have found Berryessa a very professional company to deal with.

### ***Frank Meade, Designer Pavers***

We make a variety of pavers and garden furniture in polyurethane moulds using Repel 52. Moulds have no expansion unlike some other mould release agents. The moulds do not build up residues, so profile details come out well every time. We only clean moulds when we change colours, and they are quick and easy to clean. Colours are uniform without oily stains which used to be a problem. Repel has helped us keep high quality standards which helps to grow our business.
